Splinter Box extra Small NSN (TBC)

Typical use:

Naval damage control to contain splinter damage from causing flooding. This new version has a diameter just under 250mm to fit between the narrow spars found on some patrol vessels. Otherwise it is the same concept as the rest of the splinter box range. These are in service across the world and have NATO stock codes.

Description:

Composite construction with a rough exterior to make it easy to shore in position. Fitted with a high quality EPDM T seal to provide a watertight seal. The composite materials are all Lloyds approved.

Standard specification:

Dimensions Height x diameter: 168H x 246Dia (mm)

(6.61 x 9.69")

Weight: 2.1Kg

(4.62Lb)

Material specification:

Colour: Grey RAL7040

Material: Lloyds approved composites with UV stabilised gelcoat

Resin: Class 2 Flame retardant

Seal: EPDM seal 18mm wide

Detail: Sand/Grit mixed with resin to enable grip on the outside

Manufactured in the UK
